INFINICORE SYSTEMS

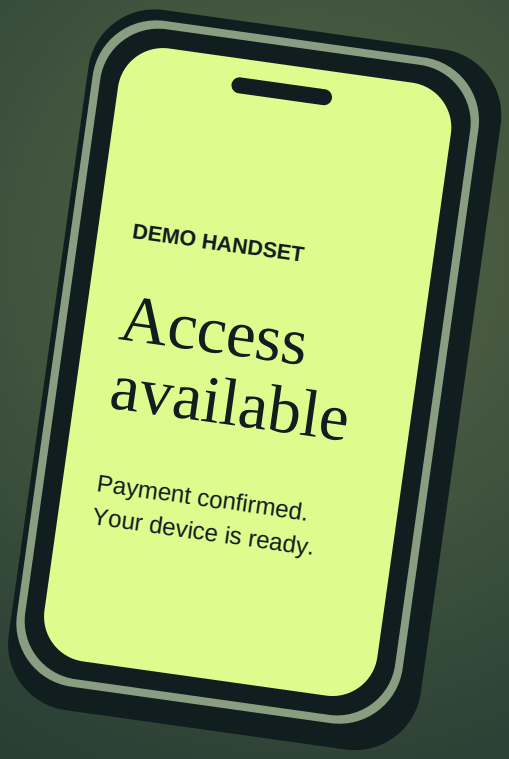

Device Finance

Payment-linked device access for hire-purchase retailers.

CUSTOMER EXPERIENCE

From reminder to restored access.

Manage instalments, grace periods and temporary restrictions from one console.

PROOF OF CONCEPT

NOVEMBER 2026

How the pilot works

Start with one supported Samsung handset model. Enrol it before handover and link it to the customer’s instalment agreement.

Remind

Flag a missed instalment and give the customer time to pay.

Restrict

Apply a temporary restriction after the grace period once arrears are confirmed.

Restore

Confirm payment and send the restoration update when the handset can receive it.

Resolve and release

Pause arrears actions during a dispute. Release the handset from management after final settlement.

When the handset goes offline

A configured policy can restrict access after missed check-ins. New server instructions wait for connectivity. The offline timer runs independently of payment status, so the pilot must test grace periods and customer recovery.

What we’ll prove on a real handset

Verify model eligibility, reset restrictions, offline timing, payment reconciliation, access restoration and final release. The demo simulates these events. Windows laptops need a separate feasibility check.
